PSC records - NOTES: Essentially, the line cards carried all the facility record, but if revamped per this record and the associated sketch they could be a more effective aid in trouble clearing. We hope to have troubles reported by circuit number which means that on M 1090 you might want toconsider a separate line card for each Leg Number. We did not check cable records, but did verify MDF cross-connections. The part that the 3 interoffice trunk pairs have in the overall circuit is not readily apparent on the line cards. See the report and sketch on Parkway office also.
